HARDWARE INSTALLATION

1. Unscrew two back panel hex bolts and remove the back panel.
2. Insert your SIM card(s) into the SIM socket(s), which are located on the bottom side of PCB.
3. Attach the panel and tighten the hex bolts.
4. Attach the mobile antenna (max torque 0.4 N·m / 3.5 lbf·in).
5. Connect open PSU leads to 16 pin terminal block:
a) red wire to top row first contact (+);
b) black wire to bottom row first contact (-).
6. Connect the 16 pin terminal block to gateway 16 pin connector and plug other end of the power adapter into a power outlet.
LOGIN TO DEVICE

1. Power on the device and connect the Ethernet cable to your computer.
2. Allow the gateway to boot up. This might take up t
3. To enter the gateway Web interface (WebUI), type http://192.168.1.1 into the URL field of your Internet browser.
4. Use login information shown in image A when prompted for authentication.
5. After you log in, you will be prompted to change your password for security reasons. The new password must contain at least 8 characters, including at least one uppercase letter, one lowercase letter and one digit. This step is mandatory, and you will not be able to interact with the gateway WebUI until you change the password.
6. When you change the gateway password, the Configuration Wizard will start. The Configuration Wizard is a tool used to set up some of the gateway main operating parameters.
7. Go to the Overview page and pay attention to the Signal Strength indication (image B). To maximize the cellular performance try adjusting the antennas or changing the location of your device to achieve the best signal conditions.
