Product Overview

The MIMO-4-15 is a 5-in-1 high performance, multi frequency antenna within a single housing. The antenna provides two cellular, two Wi-Fi and a GPS/GLONASS antenna. The two cellular MIMO antennas offer wideband coverage from 617 to 6000 MHz, covering contemporary LTE/4G and 5G bands for future proof implementation. The ultra-wideband performance of the cellular antennas allows it to be used across different operators and technologies and is ready for future cellular technologies up to 6 GHz for 5G applications, as well as Wi-Fi applications from 5 to 6 GHz.

The antenna also provides two dual-band Wi-Fi antennas, providing concurrent 2.4 GHz and 5 to 7.2 GHz on each antenna for 2x2 MIMO capability. The MIMO-4-15 exceeds the performance of most competitors due to the attention to the design of this high-performance antenna. The radiation patterns of all radiating elements, provide an excellent balance between omni-directionality, pattern diversity and good radiation abilities at the desired elevation. This is an important criterion for the transportation and marine market, which the antenna was specifically designed for. Main applications are for commercial/industrial vehicles, marine, M2M and other IoT systems using a wide range of radio technologies, while remaining futureproof over the wide frequency band.

Antenna Performance Plots

VSWR: Cellular Antenna

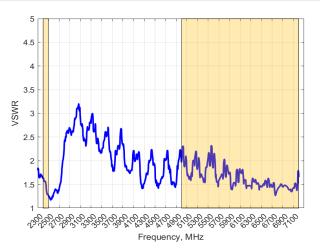

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The MIMO-4-15 delivers superior performance across all bands with a VSWR of <2:1.

*VSWR measured with 2m low loss cable.
